**Subject:** NFB slag samples & 738 UMR survey/radon

Good Morning:

Lyndsey and I were at the site until 8pm last night. We will be there by 830am.

There are a few items we should try or need to address this week.

NFB slag pieces-analytical

Chad please figure out how many samples we have to send out and work with Patrick and Ben to set up analytical with Eberline. All the same rad parameters as well as metals. Hopefully we can get that done in time to ship before Friday.

738 UMR

We have pushed this aside but we need to perform an indoor gamma scan. We can conduct with the 2x2 NaI. We also need to run a radon canister. Please contact Accuvue and see if Tick can drop on Friday. The catch there would be pickup on Monday. If Petes available I would ask him to be there for pickup as first option. If not I would see if Morgan has Weston personnel that could be there for pickup. Lastly I would see if one of our Weston could stay until Monday.

Please start working on this and let me know if all this is feasible. If Friday can be the day, I will meet with property owner prior and speak about the current situation with our program's funding and set up times for Friday's gamma survey and radon drop.

Regards,
